1	XAMPP Installation.	02 - 03
2	Student Management Problem.	04 - 12

Problem No 1: XAMPP Installation.

Explanation:

XAMPP is a free and open-source cross-platform web server solution stack package developed by Apache Friends, consisting mainly of the Apache HTTP Server, MariaDB database, and interpreters for scripts written in the PHP and Perl programming languages. Since most actual web server deployments use the same components as XAMPP, it makes transitioning from a local test server to a live server possible.

XAMPP Installation on Windows :

- To download the XAMPP server, visit the "Apache Friends" website in your web browser.
- Click on "XAMPP" for Windows
- Double-click the downloaded file to launch the XAMPP installer.
- "Setup" window will appear on the screen. Then, click on the "Next" button.
- Select the components that you want to install and click on the "Next" button.
- Choose a folder to install the XAMPP and click on the "Next" button.
- Choose a folder to install the XAMPP and click on the "Next" button.
- "Ready to Install" window will appear on the screen, then click on the "Next" button.
- Click on the "Finish" button.
- Select a language. (either English or German) and click on the "Save" button.

XAMPP Configuration Process :

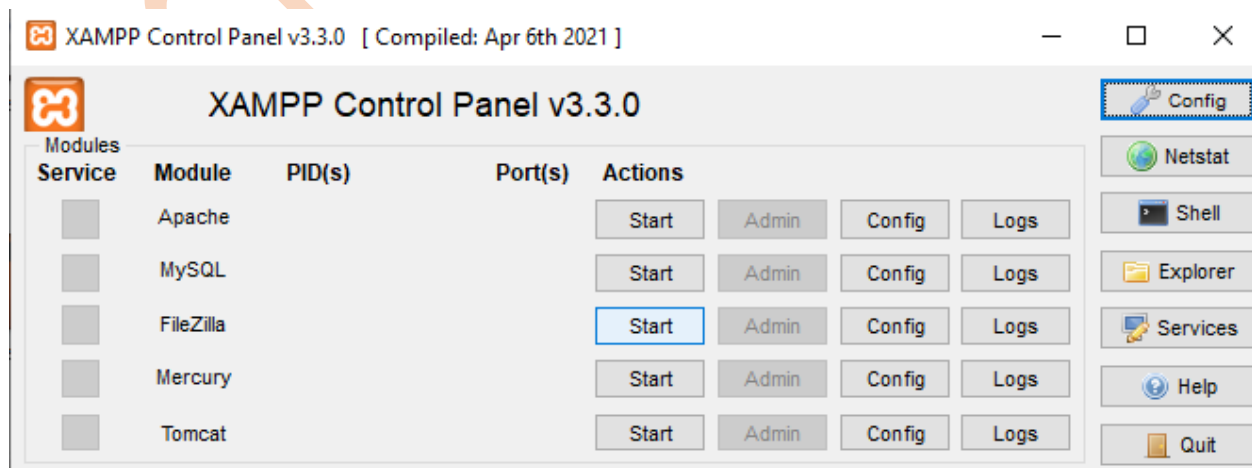

- Start the XAMPP control panel through the "Run as administrator" option.
- "XAMPP Control Panel" will appear on the screen and click on "Start" action to start the "Apache" and "MySQL" modules.

Method 1: Change the default port of Apache :

- Open the XAMPP Control Panel.
- In Apache Module Service, click on the "Config" button.
- Click on "Apache (httpd.conf)" option.
- : By pressing the "Ctrl + F" key, find the "Listen 80" and replace it with another open port (like 81 or 9080) and save the file.
- Restart the XAMPP Server.
- Again, open the "XAMPP Control Panel" and click on the start option under the "Apache" module services.

Method 2: By disabling the Internet Information Services :

- From the Start Menu, search for Control Panel.
- Click on "Programs".
- Click on the "Turn Windows Feature on or off" option.
- Uncheck (clear) the "Internet Information Services" option and click on the "OK" button.
- Click on the "Restart Now" option (This will reboot/restart your computer/laptop).
- Again, open the "XAMPP Control Panel" and click on the start option in the "Apache" module services.

Problem No 2 : Student Management System.

Login Java

Input:

```
import java.awt.HeadlessException;

import java.sql.Connection;

import java.sql.ResultSet;

import java.sql.SQLException;

import java.sql.Statement;

import javax.swing.JOptionPane;

/**
 *
 * @author Tarnob
 */
public class login extends javax.swing.JFrame {

    Connection conn =null;

    Statement stmt = null;

    ResultSet rs = null;

    public login() {
        super("Login");
        initComponents();
        conn = databaseConnection.connection();
    }

    @SuppressWarnings("unchecked")
    private void passwordActionPerformed(java.awt.event.ActionEvent evt) {

    }

    private void cancelActionPerformed (java.awt.event.ActionEvent evt) {

        System.exit(0);

    }

    private void loginActionPerformed(java.awt.event.ActionEvent evt) {

        try{
```

```

stmt = conn.createStatement();

String userEmail = email.getText();

String userPass = password. getText();

String sql ="SELECT * FROM admin WHERE mail = '"+userEmail+"' && password = '"+userPass+"'";

rs = stmt.executeQuery(sql);

if(rs.next()){

    setVisible(false);

private javax.swing.JTextField stdClass;  
private javax.swing.JButton submit;}
```

Output :

The screenshot shows a web browser window with the title "Add Student". The browser's address bar and menu bar (File, Edit) are visible. The page content is a form with a black background and white text. The form fields are as follows:

Field Label	Value
Student Name	Gourob Das Gupta
Father Name	XXXXXXXXXX
City	XXXXXXXXXX
Blood	O+
Phone	018369*****
Class	1

At the bottom of the form, there are two buttons: "Submit" and "Back".
